

# Microglial Study: We need your help!

Our study is aiming to learn about the brain changes that may explain why a person develops psychosis.

## What is involved?

- Research interview/assessment (3-4 hours)
- Blood and saliva test (15 minutes)
- PET scan of your brain (up to 2 hours)
- MRI scan of your brain (1 hour)

All participants will be asked to return for a follow-up interview, MRI scan, and blood tests after 3 and 12 months

***You will be reimbursed for your time and travel costs***
