

2023 Annual Snapshot

Research Impacts

Our Department aim is to improve health around the world through research, education and clinical training in obstetrics, gynaecology and newborn health. In 2023, our research provided valuable information for:

- Improving pregnancy outcomes
- Developing novel therapeutic strategies to reduce preterm birth and to treat preeclampsia
- Cervical Cancer control
- Core outcomes in Menopause
- Understanding endometrial receptivity to improve pregnancy outcomes
- Fertility after cancer predictor
- Identifying new therapeutics for endometriosis and improving diagnosis and treatment
- Using Biomarkers and ultrasound in late pregnancy to minimise preventable stillbirth
- Improving reproductive health through infectious diseases research
- Improving breathing support for preterm infants
